

We at “Environmental Sciences Research Foundation” (ESRF) have Organized ourselves to meet the critical need of instrumentation research and technology development for the climate crisis mitigation projects.

Our experiences over a decade and half and the wide spectrum of environmental project management, has given us deep insight into the issues. This is with passionate desire to do, what is most needed and must at this juncture of human development.

In our endeavor to make a positive contribution to the global environmental movement, we keep identifying the related gaps in various processes and develop solutions and systems to overcome them.

*One of the such concept project is independent internal **Environmental Audit of residential, industrial and institutional facilities**, Which we have began five years back with All India Institute Of Medical Sciences, New Delhi, Which is the premier health Institute of India.*

Internal Environmental Audit of the institutions and other facilities is not a common practice in India as it is considered prerogatives of regulatory and monitoring bodies like pollution control boards etc., who have their specific own agenda.

However , we meet the need of a conscience driven private environmental assessment and also to draw the benefits under triple bottom-line approach as modern corporate governance practice. The increased environmental awareness and concerns about the hazards locally as well as globally linked to climate crisis, has given us a big headway.

We do the integrated application of the existing environmental laws along with global environmental practices to develop programs up to **carbon neutral objectives in totality.**

Our other activities include the Solar water heating systems, solar power generation plants, Ecological management, water management, energy audits, besides the all time favorite and recycling projects.

There is always a need for development of total environmental management systems, With ISO accreditations in Fashion, ISO 14001 EMS is being adopted by many industries and institutions.

Given the opportunity, we will be pleased to associate with you and contribute to meet the mutual environmental responsibilities together.
